

> ARTDECK®

Produced by Staco, Artdeck® is a result of unique grating technology. It consists of a grating where the gaps in the mesh are filled with coloured granules (EPDM). This creates the characteristic Artdeck® surface which offers many advantages. Artdeck® gratings are permeable, sound-deadening and have an anti-slip surface. They can add a stylish touch to contemporary projects.

In order to ensure that the EPDM does not shift, the gratings are fitted with supporting strips. Artdeck® gratings are frequently used for platforms, roof terraces, bridge decks, walkways and stair treads. Due to our many years of experience, technical know-how and large-scale production capacity, we are able to meet your specific needs and requirements. We will also support you with specialist installation advice.

Advantages

- Non-transparent, providing a feeling of safety above water or from a height
- Completely or partly filled; indicates that it is safe to walk across the floor
- Extensive range of colours
- Fits in perfectly in architectural projects
- Permeable; offering regulated water drainage
- Sound-deadening
- Excellent anti-slip properties

Standard product properties

- Choice from a variety of blocks or stripes
- Mesh width 33 x 33 or 44 x 44 mm. The same width for stripes
- Mild steel gratings S235JR
- Plastic granule filling (EPDM)
- Welded strip 25 x 2 mm under plastic granules
- Grain hardness 70 shore A
- EPDM suitable for temperatures ranging from -25 to + 80 degrees Celsius
- Anti-slip classification comparable to German standard Rutschklasse R13
- Bearing and crossbars without anti-slip

Optional

- Steel S355JR
- Stainless steel

More information?

Would you like to know more about Artdeck®? Then please contact one of our sales specialists. They will be more than happy to inform you about the wide range of options this system has to offer in defining the image of your architectural project.
